OwlMed: The Pin (New Feature)

Marcelle Gornitsky - 2018-07-19 - [OwlMed and Canvas](#)

The Pin

The Pin allows you to bookmark any screen you visit in LCMS+ to access it whenever you need to. This feature allows you to save your spot between sessions and to access quickly the areas in LCMS+ you visit most frequently.

Understanding the Pin

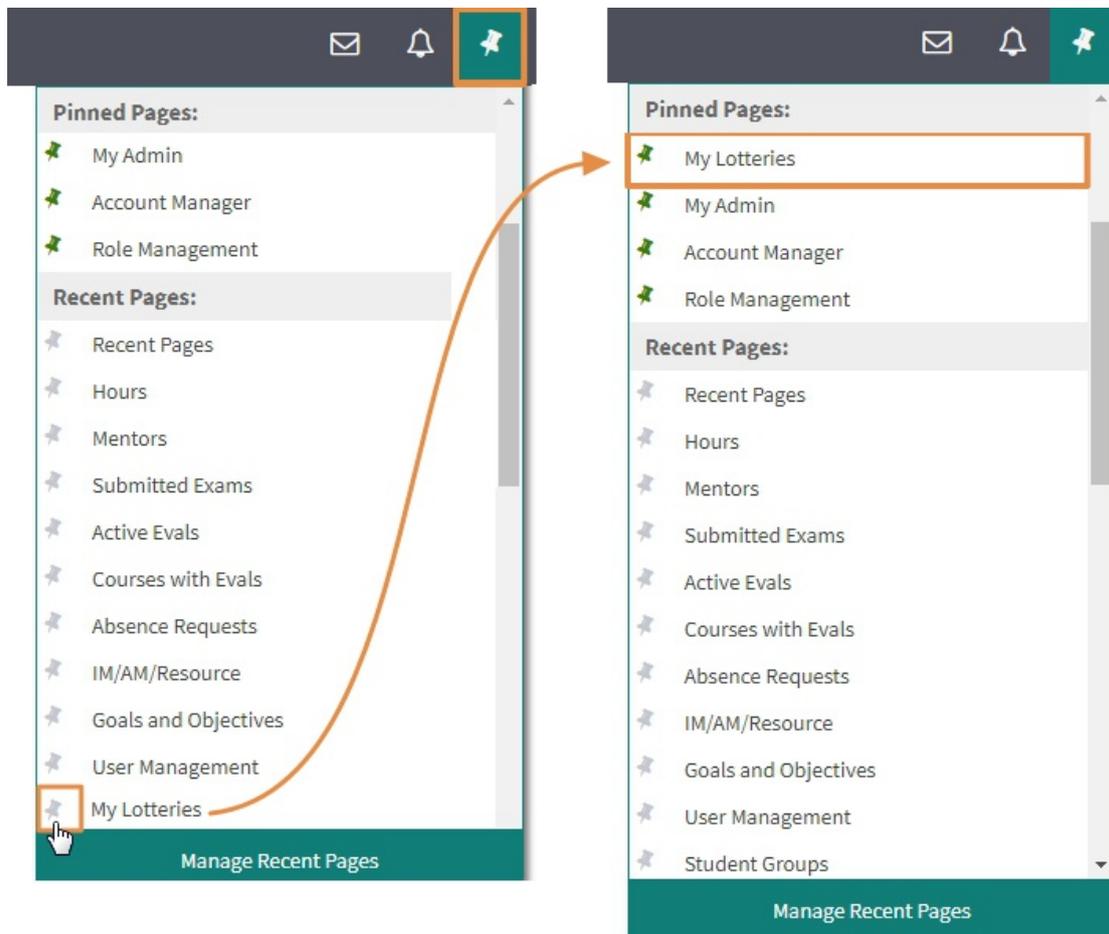

The Pin feature allows you to quickly see where you have been recently in current and past sessions. Unlike the [Session Screen feature](#), - which holds a page in an active state for the current session - the Pin will hold the screen listed in its original inactive state.

Unless you "unpin" a page from the Pinned list, you will be able to access the page every time you log into the system.

Pinning and "Unpinning" individual Pages

To pin a recent page you have visited, click on the **Pin icon** in the top right hand of your screen and click on the **gray pin icon** in the drop-down under the **Recent Pages** list.

The page will move to the top of the **Pinned Pages** list and will have a **green pin icon**.

To unpin an individual page from your **Pinned Pages** list click on the **green pin icon**.

The page will move to the top of the the **Recent Pages** list and will have a **gray pin icon**.

Manage Recent Pages

- Should you wish to remove or add pages to the Pin icon in bulk you will be able to do so by selecting **Manage my Pins** on the Pin drop-down screen.
- Once you are on the **Recents Page** you will see a list of all of your Favorite (*frequently visited screens*). On this page you have the option to manually manage your Pins by either move a favorite screen to the top of the list or "unpin" an item listed.
- To *move* a screen up on the list click the **^Move** button next to the Menu Name.
- To *remove* a screen which is already listed as a Pinned Pages, click the **Remove Pin** button next to the Menu Name.
- To *add* a screen to the Pinned Pages list, click the **Pin It** button next to the Menu Name.
- The Pin drop down will be updated with your recent changes once you click out of the **Recents Page** screen and enter into a different screen.

The screenshot displays the 'Recents' page in the LCMS Plus Admin interface. The main content area is titled 'LCMS Plus Admin Favorites' and contains a table with the following data:

LIn#	Menu Name	Count	URL
1	View As User	607	
2	Tree View	560	
3	Import Modules	539	
4	My Admin	488	
5	Account Manager	78	
6	PET Administration	42	
7	Role Management	26	
8	My Lotteries	16	

Below the table, there are two columns of action buttons: 'Move To Top' (with '^ Move' buttons) and 'Pin' (with 'Remove Pin' and 'Pin It' buttons). A sidebar on the right shows 'Pinned Pages' and 'Recent Pages' lists. A 'Manage Recent Pages' button is at the bottom of the sidebar. Orange arrows point from the 'Manage Recent Pages' button to the 'Move To Top' and 'Pin' columns.
